Gender : Any
Career Level : Top Level
Qualification : Bachelor or Master in Computer Engineering, Computer Science, or equivalent.

Job Description

Join 2x2 Consulting as an AI/ML Software Engineer for High-Performance Computing. Collaborate on developing AI and ML tools for HPC customers, translating customer requirements into AI/ML solutions, and documenting procedures for installation and maintenance. This role offers the opportunity to contribute to scaled ML technologies, providing mentorship, and making a significant impact on the future direction of ML technologies.

Responsibilities
• Develop AI and ML tools for HPC customers within a collaborative team.
• Translate customer requirements and industry trends into AI/ML tools and solutions.
• Document procedures for installation and maintenance, develop software, and perform testing and debugging.
• Provide mentorship and guidance to lower-level employees.

Requirements
• Bachelor or Master in Computer Engineering, Computer Science, or equivalent.
• 8+ years of software development experience.
• Proficiency in Python, Go, Java, and bash.
• Basic Linux knowledge.
• Experience with HPC, large-scale computing frameworks, and scientific computing.
• Familiarity with ML frameworks such as Pytorch.

Additional Skills
• AI Technologies, Cross-Domain Knowledge, Data Engineering, Data Science, Full Stack Development, Machine Learning Operations.
