Job Summary

Vacancy :

Deadline : Jan 01, 1970

Published : Nov 10, 2023

Employment Status : Full Time

Experience : 1 - <3 Years

Salary :

Gender : Any

Career Level : Mid Level

Qualification : Bachelor's degree in Data Science, Computer Science, or related field.

Job Description

Join 2x2 Consulting as a Data Scientist I specializing in Algorithm Development. Collaborate with cross-functional teams to identify and solve algorithmic problems, develop iterative algorithms, and implement them in production. Define success criteria, prioritize projects, and contribute to internal libraries, showcasing your expertise in Python and data analysis. This role offers the opportunity to work on challenging projects, communicate findings effectively, and make a significant impact.

Special Benefits:

- Collaborate on algorithmic problem-solving with cross-functional teams.
- Develop and implement iterative algorithms for business challenges.
- Define success criteria and measure impact over time.
- Implement algorithms in production in collaboration with Software Engineers.
- Prioritize projects and collaborate with stakeholders.
- Analyze data from hardware systems, create insightful visualizations.
- Contribute to internal data science libraries.

Education & Experience

- Advanced proficiency in Python and data analysis libraries.
- Strong understanding of data modeling and statistical analysis.
- Knowledge of optimization and predictive modeling techniques.
- Ability to translate general problems into algorithmic solutions.
- Excellent communication skills for technical and non-technical audiences.

Must Have

- 1-year experience with Data Bricks or PySpark.
- 1-year experience with productionizing data models.

Educational Requirements

Bachelor’s degree in Data Science, Computer Science, or related field.

Compensation & Other Benefits
