Job Description

Embark on an exciting journey as an Early Engineer, playing a crucial role in guiding both technical and cultural evolution. Tackle challenging technical problems, optimize frontend performance, and work closely with customers to understand their needs. Join a dynamic team using a stack including React, Typescript, Django, Flask, Python, Postgres, and Google Cloud Platform.

Responsibilities
• Tackle challenging technical problems such as onboarding flows, prompt iteration, and frontend optimization.
• Optimize the performance of the frontend using React and Typescript.
• A/B test changes to maximize successful user outcomes.
• Define and scope green field projects to move the company forward.
• Work closely with customers to understand their needs and own end-to-end solutions.
• Serve as a cultural pillar of the team.

Stack
• React for frontend development.
• Typescript for frontend language.
• Django and Flask for webservers and microservices.
• Python for backend development.
• Postgres as the primary database.
• Google Cloud Platform as the cloud provider.
