Job Description

We are hiring a Splunk Security Analyst to strengthen our cybersecurity team. As a key member, you will deploy, configure, and maintain Splunk for security information and event management (SIEM). Your role involves monitoring security events, investigating incidents, and collaborating with teams to enhance Splunk configurations. If you have hands-on experience with Splunk and a passion for cybersecurity, apply now.

Responsibilities:

- Deploy, configure, and maintain Splunk for security information and event management (SIEM).
- Monitor and analyze security events using Splunk queries and dashboards.
- Investigate and respond to security incidents identified through Splunk.
- Collaborate with cybersecurity teams to enhance and optimize Splunk configurations.
- Develop custom Splunk queries and reports based on security requirements.

Requirements & Experience:

- Bachelor's degree in Cybersecurity, Information Technology, or related field.
- 3+ years of hands-on experience in Splunk administration for SIEM.
- Strong understanding of security concepts and threat detection.
- Scripting skills for developing custom Splunk queries.
- Knowledge of regulatory requirements related to SIEM.
- *Must-Have:* Splunk Certified Power User or higher certification.
- Experience in creating Splunk dashboards.
