Job Description

As a Splunk Security Engineer, you will lead the design, implementation, and maintenance of Splunk architecture for enterprise-scale SIEM. Collaborate with cross-functional teams, develop custom Splunk apps, and conduct training sessions. If you're an expert in Splunk administration, passionate about security event analysis, and enjoy staying updated on industry trends, we want to hear from you.

Responsibilities:

- Design, implement, and maintain Splunk architecture for enterprise-level SIEM.
- Collaborate with cross-functional teams to integrate Splunk with security technologies.
- Develop and implement custom Splunk apps and add-ons.
- Conduct training sessions for security teams on Splunk best practices.
- Stay updated on Splunk releases and industry trends.

Requirements & Experience:

- Bachelor's degree in Computer Science, Cybersecurity, or related field.
- 4+ years of experience in Splunk architecture and administration.
- Proficient in security event analysis using Splunk.
- Scripting skills for Splunk app development.
- Experience with other SIEM tools is a plus.
- *Must-Have:* Splunk Certified Architect certification.
- Demonstrated experience in large-scale Splunk deployments
