Job Description

2x2 Consulting is seeking a Test Automation Engineer to contribute to our team focusing on innovative web-based Energy and Data Center Management software. This role involves collaborating in an Agile Scrum team, ensuring the quality of software that aids customers in managing energy consumption and environmental conditions in their facilities.

Essential Duties and Responsibilities:
• Creating and automating test scenarios, and identifying/reporting defects
• Collaboration with developers to drive successful automation strategies
• Passion for quality and test automation
• Developing and maintaining test execution steps in an automated framework
• Reviewing pull requests and fixing broken specs in product GUI

Education & Experience

• Graduate in Computer Science, Computer Engineering, or similar fields
• Strong written and verbal communication skills
• Proficiency in software test automation and scripting

Desired Knowledge/Skills:
• Linux power user
• Experience with Capybara/RSpec platform or similar frameworks
• Experience with Jenkins
